GERMAN PRODUCTION

DEANOL SALTS

MULTIFUNCTIONAL INGREDIENTS FOR BODY AND SOUL

Deanol – as precursor of Acetylcholine has various effects on the human body: It is said to enhance brain function, to improve well-being, to increase skin-firmness, to reduce facial sagging, and to remove Lipofuscin.

Therefore, Deanol salts are used in medicines, cosmetic cremes, and nutraceuticals (dietary supplements).

For following compounds we have established a regular production in Germany:

– Deanol Pidolate –

which is mainly used as active ingredient in the treatment of Dyskineasis and behavioural disorders of children. Meanwhile, it is also used in cosmetic cremes as it shows moisture-binding effects.

– Deanol p-Acetaminobenzoate –

Also this product is mainly used as API, however, cosmetic used are reported as well.

– Deanol Bitartrate –

This salt is used mainly in nutraceuticals (dietary supplement), but also in cosmetical preparations due to its moisture-binding effects.

Further Deanol salts can be developed / produced upon request.

For further information, specifications and quotations, kindly contact Mrs. Gabriele Weiss at gws@kraeber.de.
